

COMP 4555 - Group Finalization, Plan and Deliverables Document

Title: **Not Another Backrooms Game**

Game Overview

Genre: 3D Survival Horror

Platform: PC (Windows)

Engine: Godot 4.5 [1]

Programming Language: GDScript

GitHub Link: https://github.com/aaronm94/NABG_godot

Core Fantasy / Vision

Players are trapped in a vast maze of liminal rooms inspired by *The Backrooms* mythos, where each run presents new procedural layouts, resource scarcity, and lurking threats [2], [3]. The goal is to capture the uncanny, disorienting tension of exploration and survival within an endless, dreamlike space.

Design Goal

Deliver a compact yet atmospheric prototype that immerses players through procedural variation, minimalist storytelling, and sound-driven unease.

Gameplay Overview / Core Loop

1. Explore randomly generated rooms.
2. Survive by avoiding pitfalls, managing stamina, and evading enemies.
3. Escape by finding exits or key rooms; every attempt changes the layout.

Key Features

Must-Haves:

- First-person controller (movement + interaction).
- One or two hazards (AI enemy, pitfalls, resource drain).
- Procedural rooms (2-4 variations).
- Minimal UI (health bar, stamina).

Nice-to-Haves:

- Stamina or hearing-based AI.
- Room rearrangement mechanics.

- Story narrative.

Art & Aesthetic Direction

Visual Style: Based on the Backrooms creepypasta concept of yellow-lit endless rooms, representing the liminal space aesthetic within internet culture [4], [5].

Tone: An uneasy blend of realism and absurdity.

Audio: Subtle ambient hum, fluorescent buzz, and 3D spatial sound to convey distance and danger.

Development Scope

Prototype Goal: One floor with three room variants and a single hazard (pitfall or AI enemy).

Assets: Custom 3D geometry and open-source textures; royalty-free horror sound effects.

Deliverable: A cohesive prototype demonstrating procedural generation and core survival mechanics.

Team & Roles

Member	Role	Responsibilities	Weight (%)
Justin Nunez	Communications Lead, Developer (Map Design)	Coordinates team updates, designs layouts, assembles environments.	25
Anthony Tran	QA Lead, Developer (Menu & Player)	Builds menus and controller logic; handles testing and bug reports.	25
Aaron Matviyets	Creative Director, Developer (Menu & Player)	Guides aesthetic direction, ensures theme consistency, develops UI elements.	25
Justin Serrano	Team Coach, Technical Writer, Developer (Map Design)	Facilitates meetings, integrates maps, produces devlog and final documentation.	25

Development Schedule & Deliverables:

Time line: *October 1 – December 12 (10 weeks)*

October 24, 2025 - First checkpoint

- #1 & #2 Complete
- #3 In development (Some rooms created)

November 21, 2025 - 2nd checkpoint

- #3 Complete
- #4 Started (maybe)
- Further music implementation either starting or completed (room/area based)

Dec 12, 2025 - Final Submission

- Everything

☒ ~~Start & Pause Screens~~ (1 week)

☒ Play

☐ Settings/Controls (WIP)

☒ Exit

Music (0.5 weeks)

☐ Eerie menu/in-game music (WIP)

☒ ~~First-person controller~~ (1 week)

☒ Movement

☒ Camera clarity

☒ Interaction

Minimal HUD (0.5 weeks)

☒ Health bar

☒ Stamina bar

☒ Screen Vignette/Distortion

☒ Tutorial

☒ ~~Map Design~~ (5 weeks)

Explorable Map, *Procedural generated rooms with connectors (3.5 weeks)

☐ Randomization of floor levels

☐ 1-2 floors (office liminal first)

- ☒ ~~3-4 different “normal” non-interactive room variations to walk through~~
- ☒ ~~2-3 different “interactable” rooms (WIP)~~
 - ☒ button rooms
 - ☐ water-valves (optional)
 - ☒ exit door (WIP)
- ☒ Backrooms aesthetic (WIP)
- ☒ Ambient Occlusion (WIP)

One or Two hazards (1.5 weeks)

- ☒ 1. Pitfalls
- ☒ 2. Resource depletion → must-haves (stamina bar)
- ☒ 3. AI enemy wander/chase (WIP)

☐ Additional (time permitting)

- ☐ Unique room variants (individualized rooms)
- ☐ Player model design and/or animation
- ☐ Enemy model design and/or animation
- ☒ ~~Distorting rooms where reaching certain flag point rooms get rearranged for added challenge~~

Submission Format: Each checkpoint will include a Godot build (.zip), source link to the team's GitHub repository, and a brief devlog or progress report in PDF form.

Risk & Contingency Plan

Potential Risk	Mitigation
Procedural generation instability	Fallback to predefined room randomization
Scope creep or delays	Weekly check-ins and priority trim of non-essentials must-haves
Communication issues	Maintain shared Discord updates
AI enemy errors	Use simplified wander and trigger zones
